

[Protocol Development](#)

Clinical Trial Protocol Development

Every clinical investigation begins with the development of a clinical protocol. A [research protocol](#) is a document that describes how a clinical trial will be conducted (background, rationale, objectives, design, methodology, statistical considerations, and organization of a clinical research project), and the methods used to ensure the safety of the trial subjects and integrity of the data collected.

- Supplements/Appendices

The NIH provides many resources for protocol development to assist investigators in writing and developing clinical research protocols that are in compliance with regulatory/GCP requirements. Some NIH institutes have a mandatory requirement for using their protocol template.

Study Design consultation and assistance are available at UCLA. Please contact the CTSI [study design](#) team for more information

Please review the [ICH-GCP Protocol Checklist](#) for additional guidance.
